#### **DETAILED ACTION**

#### Election/Restrictions

1. Claims 6, 17 and 19 are withdrawn from further consideration pursuant to 37 CFR
1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking
claim. Election was made without traverse in the reply filed on May 17, 2005.

## Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which the subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-3, 5, 7, 12, 14, 20, 22 and 23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Stephens (2,631,046) in view of Anderson (2,142,547).

See Figs. 8-11. Stephens discloses a display device comprising a unitary, rigid sheet comprising a left center panel 15, a right center panel 16, a spine panel 19 arranged between and pivotally connected to both the left and right center panels, a left side panel 17 pivotally connected to the left center panel 15 and having a smaller width than a width of the left center panel 15 (see Figs. 10 and 11), and a right side panel 17 pivotally connected to the right center panel 16 and having a smaller width than a width of the right center panel 16 (see Figs. 10 and 11), and wherein the width of the left side panel is such to enable the left side panel to be positioned entirely alongside the left center panel, the width of the right center panel is such to enable the right side panel to be positioned entirely alongside the right center panel, and the spine panel has a width smaller than the left and right center panels and which provides for a

separation between the left and right center panels upon inward pivoting of the left and right center panels sufficient to accommodate the thickness of the left and right side panels when the left and right side panels are positioned alongside the left and right center panels (see Fig. 11). However, it is not known what material Stephens contemplates for the sheet. Because it is within the level of ordinary skill of a worker in the art to select from among known materials on the basis of their suitability for the fabrication of a given device, and because Anderson teaches that a sheet being formed from opposed front and rear substantially planar layers of material connected by parallel ribs to define cavities (i.e., cardboard) would be suitable for the fabrication of a sheet of the type disclosed by Stephens, it would have been obvious to one having ordinary skill in the art at the time the invention was made to fabricate the sheet disclosed by Stephens from cardboard, as taught by Anderson, as a matter of choice in design, based on such factors as cost and availability of the materials to the designer. Further, Stephens does not disclose how he makes the "weakened portions" about which the panel folds. Anderson teaches that it was known in the art to create a separation line (see Fig. 3) opposite a fold line in a cardboard blank, in order to fold the cardboard. It would have been obvious to one having ordinary skill in the art at the time the invention was made to make the folds in the device disclosed by Stephens with a

Regarding claim 14, see col. 4, lines 16-21.

4. Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Stephens (2,631,046) in view of Anderson (2,142,547) as applied to claim 3 above, and further in view of Tobin (5,129,069).

separation line opposite a fold line, as taught by Anderson, in order to fold the cardboard.

Stephens discloses the invention substantially as claimed, as set forth above. However, the corners of the sheet do not appear to be rounded. Tobin teaches that it was known in the art to round the corners of a cardboard blank (see Fig. 4). It would have been obvious to one having ordinary skill in the art at the time the invention was made to round the corners of the blank disclosed by Stephens, as taught by Tobin, in order to eliminate sharp corners that might cause injury.

1. Claims 8 and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Stephens (2,631,046) in view of Anderson (2,142,547), as applied to claim 1, above, and further in view of Schirer (6,155,325).

Regarding claim 8, Stephens discloses the invention substantially as claimed, as set forth above. However, Stephens does not disclose scoring the intact layer. Schirer teaches that it was known in the art to score cardboard in order to make it easier to fold. It would have been obvious to one having ordinary skill in the art at the time the invention was made to score the intact layer of the cardboard disclosed by Stephens, as taught by Schirer, in order to make it easier to fold the cardboard.

Regarding claim 13, Stephens discloses the invention substantially as claimed, as set forth above. However, Stephens does not disclose a horizontal fold. Schirer teaches that it was known in the art to provide a display device with a horizontal fold, in order to make the device easier to store. It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the device disclosed by Stephens with a horizontal fold, as taught by Schirer, in order to make the device easier to store.

2. Claims 10, 11 and 26, 27 and 29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Stephens (2,631,046) in view of Anderson (2,142,547), as applied to claim 1, above, and further in view of Wright (2002/0072598).

Page 5

Stephens discloses the invention substantially as claimed, as set forth above. However, the separation lines are perpendicular to the ribs, rather than parallel to them. Wright teaches that it was known in the art to align a separation line parallel to the ribs of a cardboard blank. It would have been obvious to one having ordinary skill in the art at the time the invention was made to align the separation lines disclosed by Stephens parallel to the ribs of the cardboard blank, as taught by Wright, as an obvious matter of choice in design.

3. Claim 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Stephens (5,129,609) in view of Anderson (2,142,547), as applied to claim 14, above, and further in view of Gardner (5,775,949).

Stephens discloses the invention substantially as claimed, as set forth above. However, the device disclosed by Stephens uses tape to maintain the device in a folded condition. Gardner teaches that it was known in the art to provide a Velcro®-type fastener to maintain a folding device in a folded condition. It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the folding device disclosed by Stephens with a Velcro®-type fastener, as taught by Gardner, in order to enable repeated, non-destructive storage of the device in a folded condition.

4. Claims 16 and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Stephens (5,129,609) in view of Anderson (2,142,547), as applied to claim 1, above, and further in view of Hanna (4,531,564).

Art Unit: 3611

Stephens discloses the invention substantially as claimed, as set forth above. However, Stephens does not disclose attaching a second panel above the first panel. Hanna teaches that it was known in the art to attach a second panel above a first panel, in order to make a taller overall assembly. It would have been obvious to one having ordinary skill in the art at the time the invention was made to use pegs, as taught by Hanna, to mount a second panel to the panel disclosed by Stephens, in order to make a taller overall assembly.
